"Identification and initial characterization of calcyclin and
phospholipase A2 in equine conceptuses.";
Mol. Reprod. Dev. 53:179-187(1999).
-!- SUBUNIT: Homodimer, antiparallel. Interacts with SUGT1 (By
similarity).
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.

Science 304:304-307(2004).

-!- FUNCTION: Regulatory subunit of calcineurim, a calcium-dependent, calmodulin stimulated protein phosphatase. Confers calcium sensitivity (By similarity).

-!- SUBUNIT: Composed of a catalytic subunit (A) and a regulatory subunit (B) (By similarity).

-!- MISCELLANEOUS: This protein has four functional calcium-binding sites (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       25-OCT-2004 (Rel. 45, Created)

"The complete genome sequence of Escherichia coli K-12.";
science 277:1453-1474(1997).
-!- FUNCTION: Involved in induction of the so-called NTR enzymes in response to nitrogen deprivation, as well as in glutamate
biosynthesis. May mediate the glutamate-dependent repression of the GLT operon.
-!- SIMILARITY: To E.coli yhcf.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Leptospira interrogans (serogroup Icterohaemorrhagiae / serovar Copenhageni).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                      This sequence represents the CAAFI calcium-binding protein isolated from human amnioctic fluid. CAAFI belongs to the S100 protein family, which includes calcyclin, MRPB, and MRP14. Intracellular calcium ion concentration is one of the key factors for intracellular signal transduction. The calcium signals are transduced by various calciumbinding proteins, such as this protein. CAAFI is normally expressed in squamous epithelial cells, neutrophils and macrophages, but atypical epithelial dells are negative for CAAFI and overexpression is observed in several types of cancer cells and neutrophils/macrophages infiltrating cancerous lesions. Detection of CAAFI (using antibodies in usual immunoassays) can be used to diagnose (or monitor) inflammation, neoplasia (particularly squamous cell carcinoma of the skin, oesophagus, lung and cervix), and skin and blood diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20

This is a human chemotactic cytokine I polypeptide. The encoding polynucleotide, along with a vector and a host cell can be used for the recombinant production of the chemotactic cytokine. Cytokine agonists and antagonists can be used for the treatment of a patient requiring a chemotactic cytokine I and for the treatment of a patient requiring the inhibition of a chemotactic cytokine I polypeptide, respectively. The chemotactic cytokine is used to treat tumours, chronic infection, leukaemia and T-cell mediated autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

This invention describes a novel composition for treating primary or secondary catdiomyopathy or cardiac insufficiency contains at least one secondary catdiomyopathy or cardiac insufficiency contains at least one fragments, or a gene transfer vector containing (II), or their mutants or fragments, or a gene transfer vector containing (II), optionally formulated with auxiliaries and/or carriers. (I) are calcium-binding proteins involved in calcium homeostasis, so their overexpression in cardiac muscle will improve pumping capacity (and overall capacity) of cardiac muscle will improve pumping capacity (and overall capacity) of relaxation rates associated with increased systolic calcium ion release from the sarboplasmic reticulum (SR) and calcium re-uptake by SR. (I) are used to treat cardiomyopathy (CMP) where inherited or caused by spontaneous mutations and ischemic CMP caused by arteriosclerosis, dilative CMP caused by toxic/infectious disease, cardiac disease caused by pulmonary and/or arterial hypertension, and structural disease caused by rhythm disorders or valve defects, generally any condition associated ubiquitously, (I) show tissue-specific expression and treat the cardiac underlying defect in the sarcoplasmic reticulum (SR) that causes cardiac an; treatment; cardiomyopathy; cardiac insufficiency; rotein; calcium homeostasis; cardiac muscle; myocardial cell; systolic calcium ion release; culum; cardiac disease; hypertension; rhythm disorder; protein, corresponding nucleic acid or cardiomyopathy and cardiac insufficiency German 1.04e-80 92.00 99DE-01015485 99DE-01015485 Composition containing S100 vector, useful for treating (first entry) Claim 35; Page 20; 36pp; Human S100A12 protein. Katus HA, Remppis A; human; .99 S100 protein; humar calcium-binding pro pumping capacity; n sarcoplasmic reticu (KATU/) KATUS.H A (REMP/) REMPPIS A WPI; 2000-673510/ N-PSDB; AAC81812. Sequence 92 AA; DE19915485-A1 07-APR-1999; Alignment Scores: valve defect Homo sapiens 07-APR-1999; 22-FEB-2001 19-0CT-2000 AAB45542;

The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypeptide or polynucleotide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GMZ activator, calgranulin B or saposin B protein families. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polynucleotides and polypeptides are used for diagnosis, prognosis, prevention and treatment of multiple sclerosis (in its various forms and phases). They may also be useful in cases of e.g. Alzheimer's and polyarkinson's diseases, amyotrophic lateral sclerosis, rheumatoid polyarthritis and lupus erythematosus, including use as vaccines and in gene therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells

polynucleotides and polypeptides are used for diagnosis, prognosis, prevention and treatment of multiple sclerosis (in its various forms and phases). They may also be useful in cases of e.g. Alzheimer's and Parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid polyarthritis and lupus erythematosus, including use as vaccines and in gene therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells

The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypeptide or polynucleotide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GMZ activator, calgranulin B or saposin B protein camplies. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polynucleotides and polypeptides are used for diagnosis, prognosis, prevention and treatment of multiple sclerosis (in its various forms and phases). They may also be useful in cases of e.g. Alzheimer's and polyarthritis and lupus erythematosus, including use as vaccines and in gene therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells
      y degenerative, neurological and
multiple sclerosis, using specified
  neurological and
Detecting, preventing and treating degenerative autoimmune diseases, particularly multiple sclepolypeptides or related nucleic acid or ligand.

sapiens Homo

The present invention describes a method for diagnosing inflammatory diseases, which comprises determining the amount and/or concentration of calgramulin C polypeptide and/or nucleic acids encoding the polypeptide present in the biological sample. Also described are methods for treating or preventing an inflammatory disease in a mammal, and medical treatment of the mammal, where the treatment is based on the stage of the disease of the mammal, where the treatment is based on the stage of the disease of the mammal, where the treatment of has antinflammatory activity and can be used in gene therapy. The method is useful for diagnosing, treating or preventing inflammatory disease, oystic fibrosis, chronic inflammatory arthritis (c) particularly Kawasaki disease), cystic fibrosis, chronic inflammatory arthritis (e.g. psoriatic arthritis, rheumatoid arthritis seronegative arthritis), systemic onset juvenile rheumatoid arthritis seronegative arthritis), an acquired inflammation above the background of an chronic inflammation, an acquired inflatmation of an already present disease.

C foronic inflammation, an acquired inflatction on the background of an chronic inflammatory disease, for an exacerbation of an already present disease, for determining the risk of relapse, and for discriminating between diseases with similar symptoms. The present sequence represents thuman calgranulin C, which is used in the exemplification of the present Diagnosing, treating or preventing inflammatory diseases comprises determining the amount and/or concentration of CALGRANULIN C polypeptide and/or nucleic acids encoding the polypeptide present in a biological Claim 7; Page 64; 64pp; English. 15-FEB-2002; 2002US-00077600 17-FEB-2003; 2003WO-EP001575 (SORG/) SORG C.                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

Novel PRO polypeptide e.g., PRO69614, PRO71106, or PRO86388 useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; PRO; immune related disorder; systemic lupus erythematosus; rheumatoid arthritis; osteoarthritis; juvenile chronic arthritis; systemic sclerosis; Sjogren's syndrome; vasculitis; sarcoidosis; autoimmune haemolytic anaemia; autoimmune thrombocytopenia; thyroiditis; diabetes mellitus; renal disease; demyelinating disease; central nervous system; peripheral nervous system; demyelinating polyneuropathy; Guillain-Barre syndrome; chronic inflammatory demyelinating polyneuropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, Guillain-Barre syndrome and chronic inflammatory demyelinating polyneuropathy. This sequence represents a human PRO polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .,

This invention relates to the novel association of protein sequences (and the genes which encode them) to the NF-kappaB pathway. The invention may be useful for the production of compounds with an antiinflammatory.

Cytostatic, heparotropic, virucide, antiarthritic, antirheumatic, gastrointestinal-Gen, antiatethmatic, antiarthritic, antirheumatic, gastrointestinal-Gen, antiatethmatic, immunosuppressive or immunosubpressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder.

Crelated to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, related to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, related to aberrant NF-kappaB regulation, viral inflammatory disorders, hypohidrotic ectodermal dysplasia, X-linked anhidrotic cotodermal dysplasia, x-linked anhidrotic cotodermal dysplasia, x-linked anhidrotic cotodermal dysplasia, viral replication, host cell survival, evasion of immune responses, rheumatoid arthritis, inflammatory cotoditis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, BAE, autoimmune disorders, incorders related to aberrant acute phase responses, organ transplant rejection, conditions related to organ transplant conditions. Companies and HIV propagation in cells infected proliferating disorders related to aberrant signal transduction, which the novel association with the NF-kappaB pathway of the invention. Note: This sequence does not appear in the specification but was sobtained by the indexer from Genbank.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral nervous system.

NO 1099; 2940pp; English a SEQ Claim 7;

The invention relates to a novel isolated muchation has antihing the invention has antihing antidabetic, dermatological, immunosuppressive, costeopathic, antidabetic, dermatological, antipsoriatic, antiallergic, antial arthmatic, hepatotropic, and respiratory activity. A polymucleotide costeopathic, antidabetic, dermatological, antipsoriatic, antiallergic, antiasthmmatic, hepatotropic, and respiratory activity. A polymucleotide coft the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the propertie is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, civenile chronic arthritis, as pondyloarthropathy, systemic sclerosis, andiopathic inflammatory myopathy, Sjogren's syndrome, systemic chronic arthrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or pertipheral nervous system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, Guillain-Barre syndrome, disease, infectious or autoimmune chronic active hepatitis, primary chrossis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, an autoimmune or immune-mediated skin disease, an autoimmune or immune-mediated skin disease, an autoimmune or immune-mediated skin disease, and sension allergic rhinitis, atopic dermatitis, food hypersensitivity, urticaria, an immunologic disease of the lung, cosinophilis pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary sequence represents a processing chickens a processing cholangirus cost the invention. The invention relates to a novel isolated nucleic acid and the PRO

New nucleic acid encoding PRO polypeptide, useful for diagnosing and treating psoriasis, Crohn's disease, Ulcerative Colitis, or rheumatoid arthritis.	Claim 9; SEQ ID NO 50; 166pp; English.	The present sequence is the protein sequence of novel human PRO polypeptide PR062943. The invention provides newly identified and isolated nucleotide sequences encoding polypeptides referred to as PRO polypeptides that are useful in the diagnosis and treatment of immunerelated diseases. Microarray analysis showed that expression of PR062943 is up-regulated 4-fold in lesional skin as compared to non-lesional skin from psoriasis patients and up-regulated 2-fold in white blood cells from rheumatoid arthritis patients as compared to those from healthy donors. It is also down-regulated 2-fold upon activation of CD4 T cells with CD28 or ICAM, down-regulated 6-fold upon differentiation of monocytes into macrophages after 7 days in differentiation media and up-regulated 4-fold upon activation of monocytes with LPS. PR062943 can be used in a claimed method of identifying a compound that inhibits expression of the gene encoding it. The candidate compound is especially an antisense nucleic acid. The PRO polypeptide can be obtained by recombinant expression, especially in CHO, Escherichia coli or yeast host cells. The polypeptide,

The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypeptide or polynucleotide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GM2 activator, calgranulin B or saposin B protein families. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polynucleotides and polypeptides are used for diagnosis, prognosis, prevention and treatment of multiple sclerosis (in its various forms and polyment of multiple sclerosis (in its various forms and polyarthritis and lupus erythematosus, including use as vaccines and in gene therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                243

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed contivity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and canno acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the converse of the invention of the converse of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  174
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21 ArgLysGlyHisPheAspThrLeuSerLysGlyGluLeuLysGlnLeuLeuThrLysGlu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ATGACAAAACTTGAAGAGCATCTGGAGGAATTGTCAATATCTTCCACCAATACTCAGTT

Sequence 4, Application US/09826589;
Sequence 4, Application US/09826589;
Patent No. US20020106726A1
GENERAL INFORMATION:
APPLICANT: Schmidt, Ann Marie
TITLE OF INVENTION:
TITLE OF INVENTION: EXTRACELLULAR NOVEL RAGE BINDING PROTEIN (EN-RAGE) AND USES THERE
CURRENT APPLICANT: 2001-04-05
CURRENT FILING DATE: 2001-04-05
NUMBER OF SEQ ID NOS: 6
SOFTWARE: Patentin version 3.1
SEQ ID NO 4
LENGTH: 90
TYPE: PRT
ORGANISM: Bovine

    Sequence 11, Application US/09872185B
    Sequence 11, Application US/09872185B
    Patent No. US20020122799A1
    GENERAL INFORMATION:
    APPLICANT: Stern, David M.
    APPLICANT: Schmidt, Ann Marie
    APPLICANT: Schmidt, Ann Marie
    APPLICANT: Lamster, Ira
    TITLE OF INVENTION: METHODS FOR TREATING INFLAMMATION
    FILE REFERENCE: 0575/64080
    CURRENT APPLICATION NUMBER: US/09/872,185B
    CURRENT FILING DATE: 2001-06-01
    NUMBER OF SEQ ID NOS: 16
    SEQ ID NO 11
    SEQ ID NO 11
    LENGTH: 90
    MANDER DEATH OF THE O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           80000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     800000

Sequence 3, Application US/09263312;
Sequence 3, Application US/09263312;
Patent No. 6555340;
GENERAL INFORMATION:
APPLICANT: Schmidt, Ann Marie
APPLICANT: Stern, David
TITLE OF INVENTION: Extracellular No. 6555340el RAGE Binding Protein (EN-RAGE);
TITLE OF INVENTION: Uses Thereof
FILE REFERENCE: 0575/55873-A
CURRENT APPLICATION NUMBER: US/09/263,312
CURRENT FILING DATE: 1999-03-05
NUMBER OF SEQ ID NOS: 5
SOFTWARE: PatentIn Ver. 2.1
SEQ ID NO 3
LENGTH: 90
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       90

sequence 1, Application US/09646651C

patent No. 6770455

general information:

APPLICANT: Kiesewetter, Stefan

APPLICANT: Kuhn, Eckehard

APPLICANT: Koch-Pelster, Brigitte

APPLICANT: Koch-Pelster, Brigitte

APPLICANT: Brunner, Herwig

TITLE OF INVENTION: METAL-CONTAINING RIBONUCLEOTIDE POLYPEPTIDES

TITLE REFERENCE: 206579

CURRENT APPLICATION NUMBER: US/09/646,651C

CURRENT APPLICATION NUMBER: PCT/EP98/07722

PRIOR APPLICATION NUMBER: DE 198 11 047.2

PRIOR FILING DATE: 1998-03-13

NUMBER OF SEQ ID NOS: 4

SOFTWARE: Patentin version 3.0

SEQ ID NO 1

LENGTH: 91
                                                                                                                                            GENEKAL INFOLUT:
